

FOR IMMEDIATE RELEASE

Inango Announces Virtual Services - A Service Delivery Platform Allowing Service Providers To Deploy End-user Services In A Fast, Cost-effective And Extensible Way

BARCELONA, SPAIN, MOBILE WORLD CONGRESS – February 25, 2019 – Inango Systems, an Israeli software company specializing in innovative solutions for communications systems, is proudly announcing their Virtual Services product; a service delivery platform enabling Service Providers to offer an unlimited range of end-user services in a way that is fast, cost-effective and extensible.

Many Service Providers are looking at ways to use the home router as a way to deliver end-user services such as Antivirus, Parental Control and others. It is already a huge market (estimated at \$221B in 2019) and growing fast.

But integrating on routers comes at a cost: software integration is complex, QA and upgrade cycles are long and sooner or later, available memory is exhausted.

Virtual Services is a consistent, fast and scalable way for Service Providers to deploy their services, taking full advantage of the routers yet avoiding their limitations.

"What we are doing enables the Service Providers to become a supermarket of services for their customers", said Jonathan Masel, CEO and founder of Inango. "Our platform functions as a virtual extension to the home router, allowing Providers to deploy an almost unlimited number and range of end-user services."

For the Service Provider, deployment becomes as easy as flipping a switch. Service portfolios can grow continually and work across a network of different routers transparently. It is the quickest and most cost-effective way of addressing this enormous market opportunity.

Inango will be present at the **MWC 2019**, reach out to us for setting up a meeting.

About Inango Systems

Inango Systems develops software for a broad range of communication applications. The company offers licensed source code solutions and provides software professional services for customized feature development as well as an extension to customer's own software teams. Inango's customers include OEMs in the networking and telecommunication markets and semiconductor companies who benefit from Inango's experience in providing highly optimized software-to-silicon solutions. Inango software is installed in millions of homes and networks worldwide.
